

pUC18 Plasmid DNA

Catalog # P-101

Lot: 15

Quantity Supplied: 1,000 ug in 1,000 ul

Concentration: 1.0 ug/ul

Storage Buffer: 10 mM Tris-Cl, 1 mM EDTA, pH 8.0

Store at -20 degrees C or below. Storage at -70 degrees or below is recommended to ensure no conversion of supercoiled form to open circular form.

Quality control:

1 ug plasmid preparation was analyzed by agarose gel electrophoresis and stained by ethidium bromide. The gel demonstrated plasmid co-migration with control plasmid, an absence of RNA and very little chromosomal DNA contamination. Plasmid was nearly all in the supercoiled state, with a very small amount of plasmid in the nicked state. Quantitation of plasmid DNA was performed by measuring the absorbance at 260 nm.

Recommendations:

Repeated freeze-thaw cycles have no effect on this product. Vortex gently after thawing. This product may be diluted in TE buffer if it is too concentrated for routine use.
